

Journal Of Modern Applied Statistical Methods

Invited Articles

- 281 - 292 **C. Mitchell Dayton** Model Comparisons Using Information Measures
- 293 - 305 **Gregory R. Hancock** Fortune Cookies, Measurement Error, And
Experimental Design

Regular Articles

- 306 - 313 **Charles F. Bond, Jr.,
F. D. Richard** P* Index Of Segregation: Distribution
Under Reassignment
- 314 - 328 **Kimberly T. Perry** A Critical Examination Of The Use Of Preliminary
Tests In Two-Sample Tests Of Location
- 329 - 340 **Christopher J. Mecklin** A Comparison Of Equivalence Testing In
Combination With Hypothesis Testing And
Effect Sizes
- 341 - 349 **Ayman Baklizi** Confidence Intervals For $P(X < Y)$ In The
Exponential Case With Common Location
Parameter
- 350 - 358 **Vincent A. R. Camara** Approximate Bayesian Confidence Intervals
For The Variance Of A Gaussian Distribution
- 359 - 370 **Alfred A. Bartolucci,
Shimin Zheng, Sejong Bae,
Karan P. Singh** Random Regression Models Based On The
Elliptically Contoured Distribution Assumptions
With Applications To Longitudinal Data
- 371 - 379 **Dudley L. Poston, Jr.,
Sherry L. McKibben** Using Zero-inflated Count Regression Models
To Estimate The Fertility Of U.S. Women
- 380 - 388 **Felix Famoye,
Daniel E. Rothe** Variable Selection For Poisson Regression Model
- 389 - 399 **Chengjie Xiong,
Yan Yan, Ming Ji** Test Of Homogeneity For Umbrella Alternatives In
Dose-Response Relationship For Poisson Variables
- 400 - 413 **Stephanie Wehry,
James Algina** Type I Error Rates Of Four Methods For
Analyzing Data Collected In A Groups vs
Individuals Design
- 414 - 424 **Terry Hyslop,
Paul J. Lupinacci** A Nonparametric Fitted Test For The
Behrens-Fisher Problem

Letters To The Editor

- 531 **Vance W. Berger** Additional Reflections On Significance Testing
- 531 - 532 **Thomas R. Knapp** Predictor Importance In Multiple Regression

End Matter

- 533 -534 **Author** Statistical Pronouncements II

JMASM is an independent print and electronic journal (<http://tbf.coe.wayne.edu/jmasm>) designed to provide an outlet for the scholarly works of applied nonparametric or parametric statisticians, data analysts, researchers, classical or modern psychometricians, quantitative or qualitative evaluators, and methodologists. Work appearing in *Regular Articles*, *Brief Reports*, and *Early Scholars* are externally peer reviewed, with input from the Editorial Board; in *Statistical Software Applications and Review* and *JMASM Algorithms and Code* are internally reviewed by the Editorial Board.

Three areas are appropriate for *JMASM*: (1) development or study of new statistical tests or procedures, or the comparison of existing statistical tests or procedures, using computer-intensive Monte Carlo, bootstrap, jackknife, or resampling methods, (2) development or study of nonparametric, robust, permutation, exact, and approximate randomization methods, and (3) applications of computer programming, preferably in Fortran (all other programming environments are welcome), related to statistical algorithms, pseudo-random number generators, simulation techniques, and self-contained executable code to carry out new or interesting statistical methods. Elegant derivations, as well as articles with no take-home message to practitioners, have low priority. Articles based on Monte Carlo (and other computer-intensive) methods designed to evaluate new or existing techniques or practices, particularly as they relate to novel applications of modern methods to everyday data analysis problems, have high priority.

Problems may arise from applied statistics and data analysis; experimental and nonexperimental research design; psychometry, testing, and measurement; and quantitative or qualitative evaluation. They should relate to the social and behavioral sciences, especially education and psychology. Applications from other traditions, such as actuarial statistics, biometrics or biostatistics, chemometrics, econometrics, environmetrics, jurimetrics, quality control, and sociometrics are welcome. Applied methods from other disciplines (e.g., astronomy, business, engineering, genetics, logic, nursing, marketing, medicine, oceanography, pharmacy, physics, political science) are acceptable if the demonstration holds promise for the social and behavioral sciences.
